

Lessard-Sams Outdoor Heritage Council

Laws of Minnesota 2012 Accomplishment Plan

Date: June 26, 2017

Program or Project Title: Minnesota Moose Habitat Collaborative

Funds Recommended: \$ 960,000

Manager's Name: Kimberly Nelson

Organization: Minnesota Deer Hunters Association

Address: 460 Peterson Road

City: Grand Rapids, 55744

Office Number: 218-327-1103

Email: kimn@mndeerhunters.com

Legislative Citation: ML 2012, Ch. 264, Art. 1, Sec. 2, Subd. 3(e)

Appropriation Language: \$960,000 in the second year is to the commissioner of natural resources for an agreement with the Minnesota Deer Hunters Association to restore and enhance public forest lands in northeastern Minnesota for moose habitat purposes. A list of proposed restorations and enhancements must be provided as part of the required accomplishment plan.

County Locations: Cook, Lake, and St. Louis.

Regions in which work will take place:

- Northern Forest

Activity types:

- Enhance

Priority resources addressed by activity:

- Forest

Abstract:

The Minnesota Moose Habitat Collaborative enhances up to 3569 acres of moose habitat in northern forests within Cook, Lake and St. Louis counties on county, state, and tribal lands.

Design and scope of work:

Problems to be addressed:

Between the late 1980s and the early 2000s, the estimated moose (*Alces alces*) population in NW Minnesota declined dramatically from over 4,000 to fewer than 100 animals. Moose population estimates, hunter success rates and the anecdotal observations of local residents indicate the population of NE MN moose has been in a slow decline for a number of years. MN Department of Natural Resources (DNR) reports the NE moose population estimate has declined from 8,000 in 2005 to 4,900 in 2011. Of special concern is that mortality rates of radio collared moose in NE MN are comparable to mortality rates observed during the beginning of the decline in the NW MN moose population.

Moose have iconic status in Minnesota and are a critical component of the cultural identity, hunting heritage, and economy of northern Minnesota. Recognizing this significance and the prospective loss of the species from MN, the State Legislature passed legislation in 2008

directed the Minnesota DNR to develop a Management and Research Plan for Moose in Minnesota. In turn, the DNR created a Moose Advisory Committee (MAC) consisting of 18 individuals with varied perspectives and expertise on the status of Minnesota's moose population.

The MAC provided recommendations for suggested components of the Moose Management Plan to the DNR that covered socioeconomics, research, harvest, deer management, funding and habitat. Specifically, the MAC noted that management for high quality moose habitat will be increasingly important for maintaining a moose population in the state.

The goals and recommendations made by the MAC are consistent with maintaining healthy, viable forests over the long-term. This proposal represents a synergy of managing for a variety of forest conditions and species, while paying special tribute to moose as an emblematic species. The restoration and enhancement actions described in this proposal reflect the intersection of managing for healthy northern forests with an emphasis on moose habitat using techniques such as prescribed fire, brush removal, selective restoration planting, and timber harvest such that the natural variability of northern forests is restored over time. MAC-recommended benefits include providing refugia through restoration and maintenance of high quality cover, restoring habitat complexity, and creating additional high quality browse areas.

Scope of work:

NE Minnesota provides an opportunity for large scale collaborative habitat management because over 82% of this region is in some form of public ownership. Primary moose range in NE Minnesota currently covers approximately 5,500 square miles (about 3.5 million acres). This grant application includes proposed habitat management prescriptions for projects on approximately 3569 acres on county, state, federal, and tribal lands in the heart of Minnesota moose range.

How priorities were set:

Members of the MN Moose Habitat Collaborative established an internal habitat sub-committee, composed of scientists and resource management to vet and rank proposed habitat management projects submitted by the various public land management agencies. This committee evaluated proposed projects based on locations within moose range, degree to which activities support the goals of other statewide conservation plans, existing moose densities, initial habitat research results, and the likelihood of the proposed projects for enhancing moose forage and cover.

Urgency and opportunity:

The substantial cultural and ecological significance of moose to Minnesota merits a prompt effort and long-term commitment to focus forest restoration and enhancement activities within moose range. Over the course of just two decades, the moose population in NW Minnesota effectively "disappeared." As noted earlier in this proposal, it appears that the moose population in NE Minnesota may well be in the midst of a similar decline. At this point in time, we have a unique opportunity to use lessons learned from the moose decline in NW Minnesota. Utilizing the best available science from NE Minnesota, we propose to take advantage of this robust collaborative formed around the moose issue and take early and aggressive steps to enhance habitat suitable for sustaining the NE Minnesota moose population.

Prior to the harvest and management of forests in this region, fire was the most important disturbance that resulted in foraging habitat. In this project, moose foraging habitat will be restored by brush shearing, prescribed burning, selective planting, and by timber harvest on up to 3569 acres. Each of these methods is designed to mimic natural disturbance, an approach that is consistent with multiple habitat and ecological objectives, and will set forest habitat back on project sites to a younger seedling-sapling stage providing nutritious moose browse.

This project will enhance forest landscape objectives by increasing stand complexity, promoting shrub production and diversity, and maintaining thermal cover components with variable thinning and planting. Intermediate and partial harvests will be designed to mimic disturbance patterns caused by stand decline due to age, fire, wind-throw and insect and disease outbreaks. Regeneration techniques will encourage mixed stands similar in composition, age, and size to those existing under the range of natural variation and discourage the establishment of stands uniformly dominated by a single species. In other words, this project will provide immediate benefits for moose forage through the creation of early succession habitat and ultimately result in a heterogeneous habit matrix similar to what existed when fire was the main disturbance agent and increase the long term benefit to moose for both cover and forage.

The project selection committee chose project sites with forest stands that were partially harvested, decadent, poorly stocked with trees, or provided such poor browse condition that they were of little or no benefit to moose. Site preparation of the project sites will include a variety of treatments such as shearing, rock raking and disc trenching, over story tree harvest, tree planting, and burning. This will result in vigorous new shrub and tree sprouting. In addition, selective planting of low density conifers on some units will eventually lead to more cover interspersed with browse.

Moose are a top-level herbivore in NE Minnesota and wider ranging than many of the mammal species that will use this restored habitat. This project will result in immediate, large scale benefits by creating moose foraging habitat. Browse will be available on sites that currently have little or no value to moose or other species. In the longer-term, establishment of conifers will provide thermal and escape covers. Ultimately, this project will encourage a heterogeneous habitat matrix that will result in a healthy landscape that is more resilient providing for an ecologically diverse and balanced landscape condition with greater benefit to moose and a number of Species of Greatest Conservation Need.

Many of the prescriptions proposed in this project involve regeneration of brush in old cuts, planting sites, and mature forest gaps of various size; and most include conifer planting. In the short-term, these habitat enhancement prescriptions will result in a multitude of regional forestry job opportunities which will include a management staff member for site preparations, contract work oversight and ground-truthing as well as numerous contracting agencies from local communities. In the long-term, this project will result in improved forest habitat, forest productivity, and product diversity.

Stakeholder involvement and/or opposition:

The Minnesota Moose Habitat Management Collaborative includes representatives from county, state, federal, tribal agencies, private organizations, and academia. Although each partner organization has a unique mission, this proposal represents a common commitment to restoration and enhancement of northern forests within moose range, collaborative forest management, and a concern for sustaining Minnesota's rare and declining wildlife species. We have not encountered stakeholder opposition to this proposal, which is designed to be inclusive of numerous partners:

Organizations: Minnesota Deer Hunters Association (MDHA), The Nature Conservancy (TNC)

Counties: Cook, Lake, and St. Louis

Tribal Agencies: 1854 Treaty Authority, Fond du Lac Band of Lake Superior

Chippewa, Grand Portage Band of Lake Superior Chippewa

Federal: Superior National Forest (SNF)

University: University of Minnesota Duluth (UMD)

State Agencies: MN Department of Natural Resources (DNR)

NE MN has a track record of successful landscape collaborative. A subset of the Moose Habitat Collaborative participants including the DNR, The Nature Conservancy, Minnesota Forest Resources Council, USFS, St. Louis County, and Lake County, have been working effectively together for over a decade to implement cross-boundary restoration and reforestation projects under the auspices of the Minnesota Forest Resource's Northeast Landscape Plan.

Ultimately, "stakeholders" include the general populace of Minnesota, but NE MN especially. From a hunting perspective, moose hunting licenses generate revenue used to fund DNR moose research and management. Each year Minnesota's "once in a lifetime" moose hunt garners tremendous amounts of publicity, public interest and enthusiasm regarding this largest of Minnesota's prey species. Tribal members are allowed to hunt moose annually and moose meat is a very important staple of their subsistence. Even more important is the moose's contribution to tribal hunting heritage.

Many communities and entrepreneurs use moose as trademark and advertising tools to promote or sell their area or business. Much the same

as moose hunting, they are directly impacted by the abundance or scarcity of moose in the NE. Economically, sociologically and ecologically, moose are intimately beneficial to Minnesota.

Planning

The project will make significant, on-the-ground progress toward achieving multiple components of the LSOHC's "Northern Forest Section Vision." The work emphasizes restoration and forest-based management on public lands within moose range given recent population declines, economic importance, and cherished status of this iconic species. The project will also benefit a suite of wildlife Species of Greatest Conservation Need (SGCN) identified in Tomorrow's Habitat for the Wild and Rare (2006) and are listed below. In particular, this proposal directly emphasizes implementation of actions 3 & 4 under the "Priority Actions for the Northern Forest Section:"

This project relates to several science-based, statewide conservation and habitat plans described below.

1. Statewide Conservation and Preservation Plan (2008): Of the four primary areas of recommendation proposed by the 2008 plan, our project will implement key aspects of the Land Use and Habitat categories. The specific recommendations the project addresses fall under the Strategic Areas of: II) Land and Water Restoration and Protection; and III) Sustainable Practice (p. 32). In particular, the proposed work will implement the following recommendations for forest land actions (pp. 131-133) paraphrased here - Support and expand sustainable practices on forested lands such as: 10c) Promote collective/cooperative management of forests to increase multiple benefits; 10e) Develop management practices that improve ecosystem resilience; 10f) Support use of fire to increase forest health and biodiversity.

2. Minnesota's Strategic Conservation Agenda (2009-2013):

The Minnesota DNR in its Strategic Conservation Agenda explicitly identifies restoration and enhancement of degraded habitats through conservation partnerships as goals.

3. Tomorrow's Habitat for the Wild and Rare: an Action Plan for Minnesota Wildlife (2006): The proposed restoration and enhancement work will improve habitat for several Species of Greatest Conservation Need addressed in the 2006 plan 1) early-successional enhancements (moose foraging habitat) - golden winged warbler, black-backed woodpecker, heather vole and American woodcock; 2) Conifer plantings (moose cover) - gray wolf, lynx, northern goshawk, winter wren, boreal chickadee, boreal owl, Canada warbler, and Connecticut warbler. The management activities (pp. 124-195) implement priority conservation actions called for across multiple ecological subsections with an emphasis on incorporating Species of Greatest Conservation Need habitat concerns in forest management and planning within mixed conifer forest and aquatic habitats.

4. Moose Advisory Committee Report to the Minnesota Department of Natural Resources (2009):

The proposed project will implement several of the Habitat Management Recommendations within the Northeast moose range (pp. 34-35): Increase stand complexity, promote regeneration techniques that encourage mixed stands (e.g., range of natural variability), promote browse production in proximity to winter/summer thermal cover and aquatic feeding areas, promote more regular use of prescribed fire.

5. Minnesota Forest Resources Council (MFRC) Northeast Minnesota Landscape Plan (2003): The landscape plan's desired future conditions focus on moving towards the natural range of variability in forest conditions in order to provide a diverse range of habitat conditions that can maintain viable plant and animal populations. While proposed treatments focus on moose habitat, the long-term focus on restoring mixed-conifer and hardwood forests is very consistent with the MFRC's Northeast Minnesota Landscape Plan objectives. Prescribed burns and other treatments will improve the quality of existing early succession habitat while the planting of long-lived conifers and some hardwoods will increase species diversity and help meet long-term landscape plan objectives.

6. Nature Conservancy's Superior Mixed Forest Ecoregional Plan (2002): identified a suite of conservation areas that best represent the ecosystems and species to serve as a blueprint for conservation action in this ecoregion. This plan identified a number of key threats to ecosystems and species, including moose. This proposal addresses two of those key threats; altered fire regimes and forests outside the range of natural variation. The fire treatments, in addition to improving moose habitat, will create mineral soil seedbeds for conifers and reduce hazardous fuel loads. The conifer planting, along with creating cover and future mixed forest habitat will also help move forests towards natural variability conditions.

7. National Forest Land and Resource Management Plan (2004): This 10-15 year duration plan, built with extensive public, Tribal, and other public agency input, has a goal of managing high quality and well-distributed forest habitat to support populations of wildlife, including moose, for their many cultural, subsistence, wildlife watching, hunting, recreational and other values now and into the future (p2-27, 2-36). Specifically, the plan's forest habitat objectives include increasing habitats that benefit moose: young forest to provide high quality browse; older forests with gaps in the canopy for browse; older conifer forest to provide cover from heat and predators (pp 2-22 to 2-24; 2-61 to 2-78).

8. U.S. Fish & Wildlife Strategic Habitat Conservation model (SHC) (2008): This grant proposal is based on science-based strategic planning and evaluation, similar to the SHC. Determining the cause, identifying population objectives, implementing management actions, results verification and utilizing partnerships are SHC objectives (p11-17). In agreement with SHC guidelines, this grant's treatment proposal implements several types of management treatments to create and restore moose foraging habitat through implementation methods that set back forest succession to an earlier seedling-sapling stage on treatment sites.

9. Fond du Lac Resource Management Division Integrated Resource Management Plan (2008): Moose are identified as an important species for the Fond du Lac Band of Lake Superior Chippewa and the Band's Resource Management Division should seek to maintain and enhance moose numbers and moose habitat (pp. 53-57).

10. Grand Portage Forest Resource Management Plan (1987): The scope of this plan addresses six wildlife entities which the Band has identified as being of particular importance; 1) Moose, 2) Whitetail Deer, 3) Ruffed Grouse, 4) Furbearers, 5) Waterfowl, 6) Black Bear. The plan states a desire "to manage for optimum moose habitat."

Which sections of the Minnesota Statewide Conservation and Preservation Plan are applicable to this program:

- Not Listed

Which other plans are addressed in this program:

- Minnesota DNR Strategic Conservation Agenda
- Minnesota Forest Resource Council Landscape Plans
- Minnesota's Wildlife Action Plan 2015-2025
- Moose Advisory Committee Report to the Minnesota DNR
- Superior National Forest Land and Resource Management Plan
- The Nature Conservancy's Superior Mixed Forest Ecoregional Plan
- U.S. Fish and Wildlife Service Strategic Habitat Conservation Model
- Fond du Lac Resource Management Division Integrated Resource Management Plan (2008). Grand Portage Forest Resource Management Plan (1987)

Which LSOHC state-wide priorities are addressed in this program:

Describe the relationship of the funds:

Not Listed

How does this program accelerate or supplement your current efforts in this area:

Outside of this grant proposal to LSOHC, Minnesota Deer Hunters Association does not have an existing budget for restoration of Moose Habitat in NE Minnesota. Therefore, this funding is essential and will not substitute for traditional funding sources. Additionally, the project site treatments outlined within this grant are above and beyond the normal scope of the collaborators. Chosen sites are of sub-commercial grade timber, are inaccessible, are decadent, or are otherwise predisposed to be disadvantageous for timber harvest. As such, other than through this grant, funding would not be readily available to accomplish the moose habitat enhancement prescribed.

Per MS 97A.056, Subd. 24, Any state agency or organization requesting a direct appropriation from the OHF must inform the LSOHC at the time of the request for funding is made, whether the request is supplanting or is a substitution for any previous funding that was not from a legacy fund and was used for the same purpose:

Not Listed

How will you sustain and/or maintain this work after the Outdoor Heritage Funds are expended:

The Minnesota Moose Habitat Collaborative project will serve as a platform for developing an even larger scale, decade or longer, vision for management of northern forests within the in NE Minnesota moose range. Implementation of management activities included in this project proposal will coincide with an update of the Minnesota Forest Resources Council's Northeast Landscape Plan. Through the process of updating this plan, Minnesota Forest Resources Council's Northeast Landscape Committee support and advice will be sought as a connection with existing resource management collaborative already operating in northern Minnesota. County, state, tribal, federal and university wildlife and forestry professionals will also be consulted to review result verifications and pursue further collaboration toward advancement and expansion of moose habitat enhancement and maintenance.

The Moose Habitat Collaborative intends to pursue other long-term funding for moose habitat and other related forest restoration projects from federal, private and tribal sources. Also, at the end of the term of this grant, the Collaborative will re-apply to LSOHC for additional state funds. This second phase of funding will be complemented by a mix of federal, tribal and private funding proposals, and will support ongoing stewardship of lands treated with funding from this request, along with management activities on new sites identified for treatment by the Moose Habitat Collaborative.

Activity Details:

Will there be planting of corn or any crop on OHF land purchased or restored in this program - **Not Listed**

Is the activity on permanently protected land per 97A.056, subd 13(f) and/or public waters per MS 103G.005, Subd. 15 - **Yes**

Accomplishment Timeline:

Activity	Approximate Date Completed
Funding Available - Secure work/contract agreements with agencies and contractors	July 2012
Initiate Enhancements - Site development & preparation	August 2012
Enhancement Continued - Winter enhancements complete - Remaining burn preparations complete	February 2013 - June 2015
Enhancement Complete - Remaining burns complete	June 2015

Date of Final Report Submission: 11/1/2017

Federal Funding:

Do you anticipate federal funds as a match for this program - **Not Listed**

Outcomes:

Programs in the northern forest region:

- Increase in quality, diversity and quantity of browse available for moose using primarily shearing and prescribed fire. Increase stand complexity and maintain thermal cover components using a variety of silvicultural techniques. Increased public awareness of the need for quality moose habitat across NE Minnesota. Increased use of managed areas by moose and Species of Greatest Conservation Need.
